

Boiler Room Remote Monitoring and Total Boiler Room Control

Partnering with McKenna Boiler to implement boiler technology will improve boiler room efficiency, reduce overhead expenses, and increase productivity. Here are a few key benefits of installing innovative boiler technology and total remote monitoring.

Real-Time Remote Monitoring

The Autoflame Mk8 DTI allows you to collect information on up to ten systems in a single location so you can quickly and easily collect data on your boilers, ensuring they are operating as quickly as possible.

Automate Tasks

Using the Autoflame DTI system you can collect a wealth of information from various areas of your boiler system, allowing you to automate a lot of the tasks that you used to do by hand.

Access to Universal Inputs and Outputs

Using the Autoflame Mk8 DTI system, you will have access to detailed logging inputs and output, making it easier for you to integrate your plant equipment. With access to configurable alarms, you can also customize the system to meet your needs.

Reduce Repair Costs

Boiler technology and advanced monitoring will prevent the likelihood of problems impacting your boiler system, extend their lifespans, avoid repair bills, and keep your utility bills as low as possible.
